The System One drinking water purifier by Above Water Systems, a second generation family drinking water business based in the beautiful lakes area of Wisconsin, USA. The System One was designed by today's leading engineers of drinking water purification systems. Its tested performance and robust design highlight the accomplishment of our team.

The System One Drinking Water purifier features our AWS-1 solid carbon block filter technology to reduce the presence of contaminants of both aesthetic and health concern. It is also equipped with arsenic-adsorptive media, which gives the System One the special ability to take on deadly Arsenic V, a toxin sometimes found in water that is detrimental to human health.

The System One water purifier is available in a variety of configurations. You can install the filter on your sink faucet using either a dual-hose diverter valve or a single-hose diverter valve. Or, you can install it below your sink with its own drinking water faucet.

**Capacity may vary based on source water*
